About Me

AI Engineer & Expert • Software Engineer • Context Engineer • Prompt Engineer

As an experienced Software Engineer with deep expertise in Context and Prompt Engineering, I bring the technical competence to build the next generation of AI systems. My goal: to transform companies sustainably through innovative AI-First approaches.

After years of versatile web development as a Software Engineer, I now live AI-First: as an AI Engineer, I use Claude Code and modern AI tools not merely as aids, but as a central development partner.

My evolution is reflected in my current projects – from extending Vapi MCP for automated voice-agent testing, to AI-powered video-streaming solutions, to marketing automation tools.

I choose the optimal technology for each use case – whether TypeScript, Python, or React – and work with Docker Compose and Taskmaster to redefine the boundaries of what is possible with AI.

My focus is on Agentic Development – the art of developing AI agents into optimal, autonomous problem-solvers through precise Prompt and Context Engineering.

I continuously evaluate the latest tools and MCPs, define efficient workflows, and combine them with my years of development experience.

Claude Desktop Conversation History – documented AI development workflows with Sequential Thinking

<https://github.com/orcasai/pdf-compress/blob/main/context/prompting/claude-desktop-history.md>

ChatGPT AVM History – advanced Prompt Engineering techniques for complex problem-solving

<https://github.com/orcasai/pdf-compress/blob/main/context/prompting/chatgpt-avm-history.md>

Prototyping with AI: From idea to working prototype in hours rather than weeks – through AI-voice-assisted research, automated web research, and Deep Research (10+ minutes) for complex subject areas.

AI-optimized Testing: I use established testing methods that are driven and evaluated by AI.

My approach: rapid result evaluation with minimal prompt changes to identify clear cause-and-effect relationships.

Privacy and security are my top priorities. I follow best practices, apply modern security concepts, and keep emerging approaches such as Guardrails firmly in focus, in order to design AI workflows to be as secure and privacy-compliant as possible.

Warp Ai History – summary of the history for resolving the file-size issue with Kickresume PDFs

<https://github.com/orcasai/pdf-compress/blob/main/context/testing/warp-ai-conversation-export.md>

Tool orchestration with state-of-the-art AI technologies:

- Sequential Thinking MCP: Structured in-depth analysis of complex documents with iterative research and feedback loops
- Context Engineering: Optimal context provisioning through llms.txt, Claude.md, and specialized MCPs for maximum AI understanding.

LLMS.txt Standard 2025 – optimized context provisioning for LLM integration

<https://github.com/orcasai/pdf-compress/blob/main/llms.txt>

AI-First Naming Conventions – structured repository organization according to LLM standards

<https://github.com/orcasai/pdf-compress/blob/main/STRUCTURE.md>

- Notion MCP Integration: Full project management with database access – reading, editing, and creating across all Notion tables
- Claude Code Hooks: Automated tests and workflows through file-type-specific tool calls (e.g. targeted validations to exclude customer-sensitive information)

Custom Slash Commands – specialized Claude Code commands for development automation (Private Repository)

<https://github.com/orcasai/.claude/tree/main/commands>

Optimization – proven best practices for efficient terminal workflows (Private Repository)

<https://github.com/orcasai/.claude/blob/main/docs/best-practices/bash-command-optimization.csv>

- Taskmaster Planning: From Product Requirement Document (PRD) to structured roadmaps – using proven, clearly structured as well as innovative experimental planning approaches that consistently deliver high quality
- Enterprise Integrations: Slack/Jira MCPs for seamless team collaboration within existing enterprise structures
- AI-Voice Workflows: Super Whisper + proprietary tool combinations for efficient voice-to-text support

Technology Stack & AI Integration

My solid full-stack experience (7+ years of web development plus 3 years of training) and absolute AI focus since generative AI reached the mainstream has shown me which technologies lend themselves to “AI-First” approaches.

I consistently rely on proven tools that support AI context understanding: React and TypeScript for modern frontends, Python for AI integration, Markdown for structured documentation.

This clear prioritization – combined with Git for AI-assisted development workflows and Docker for scalable AI deployments – allows me to concentrate fully on the advantages of AI innovation.

Systematic Git Workflows – structured commit strategies with AI assistant for consistent project organization

<https://github.com/orcasai/pdf-compress/blob/main/context/visual-examples/preferences/ein-kleiner-einblick.in-commit-workflow.png>

Speech-to-Text Integration – Super Whisper for efficient AI-voice development workflows

<https://github.com/orcasai/pdf-compress/blob/main/context/visual-examples/preferences/das-wichtigste-tool-von-allen.png>

My Vision: AI-First as a Competitive Advantage

I am looking for companies that understand AI not as an add-on, but as a core strategy – because the future belongs to those who use AI correctly today.

My goal is to work with teams that are ready to revolutionize traditional development processes through AI-assisted workflows.

With my expertise in Context Engineering, Agentic Development, and modern tool orchestration, I turn AI prototypes into productive systems – not in a few years, but NOW.

Together we create the decisive competitive advantage through consistent AI-First development.

Additional Information:

This repository (<https://github.com/orcasai/pdf-compress>) was created specifically for this application and exemplifies my AI-First approach: structured AI collaboration to solve real problems. The 70/30 principle – 70% strategic planning with AI, 30% targeted implementation – is visible in every step of the project. The extensive documentation of prompting strategies, sequential thinking processes, and iterative improvements enables reproducible quality and illustrates how complex development tasks are systematically mastered through precise AI orchestration.

Professional Experience

Change IT Solutions GmbH ▪ Remote ▪ Germany

Software Engineer

10/2024 – 01/2025

Development Environment and Infrastructure

- Migrated the development environment to Docker Compose: Successfully transitioned from local Apache/MySQL installations to a containerized development environment, establishing consistent development conditions across the team.
- Automated database processes: Developed scripts for automated database provisioning and initial approaches to database personalization for Linux systems.
- Optimized existing APIs: Implemented targeted adjustments to existing interfaces to improve performance and compatibility with the new Docker environment.

Conceptual Work and Future Planning

- Big data conceptualization: Developed a concept for the future analysis of usage data and optimization of the knowledge management system based on data-driven insights.
- AI integration evaluation: Analyzed and assessed potential AI use cases for automating development processes and improving recommendation systems.
- Documentation and knowledge transfer: Created technical documentation for the implemented solutions and concepts to ensure long-term sustainability.

Rissc Solutions GmbH ▪ Remote ▪ Germany

Software Engineer

02/2018 – 07/2024

Laravel and Magento Development

Web2Print Solutions and Customization Tools

- Developed and optimized a custom web editor for personalizing products such as flyers, mugs, and other customized items. The web editor was designed as a core component of the in-house solution and continuously extended.
- Integrated frontend and backend functionality in Laravel to ensure a seamless user experience and smooth data processing within the print pipeline.
- Built and managed database structures for the customization tool using MySQL, with a focus on performance optimization and scalability to meet growing requirements.
- Developed RESTful APIs to ensure communication between the web editor, the print infrastructure, and the Magento shops.

Magento 2 Shops and eCommerce Solutions

- Took primary ownership of Magento development over the final two to three years, including the full maintenance and continued development of multiple Magento 2 shops.
- Integrated the in-house customization tool as a plugin solution into Magento, enabling customers to design personalized products directly in the shops.
- Implemented customer-oriented features, including dynamic product configurations, multi-store support, and custom discount models.
- Integrated, updated, and reviewed third-party extensions to expand the feature set of the shops and optimize their performance.
- Implemented payment gateways and optimized checkout processes to improve conversion rates.
- Performed regular security updates, patches, and bug fixes to ensure the stability and security of the shops.

Deployment and Development Processes

- Managed feature branches, hotfixes, and releases using Bitbucket and Git, including code reviews via pull requests to maintain code quality.
- Optimized the Continuous Integration/Continuous Deployment (CI/CD) pipeline to deliver fast and reliable updates.
- Monitored and maintained the production environment, including regular backups and performance monitoring to ensure high availability.

Collaboration and Project Management

- Worked closely with the project management team and clients to analyze individual requirements and translate them into solutions.
- Used Jira for ticket management, task tracking, and progress documentation.
- Fostered an active feedback culture to strengthen collaboration between developers and other departments.

Highlights and Key Contributions

- Assumed primary responsibility for integrating and advancing the in-house customization tool within Magento shops.
- Developed and implemented scalable in-house solutions that significantly contributed to efficiency improvements in the Web2Print pipeline.
- Introduced innovative concepts into the eCommerce landscape, including dynamic product configurations and automated processes that improved the workflow for both customers and internal teams.

Full-Stack Engineer ▪ Karlsruhe ▪ Germany

Software Engineer

06/2017 – 12/2017

Web Development (Frontend & Backend)

- Projects for enterprise clients in the telecommunications industry: Developed, deployed, integrated, and tested custom web solutions.
- Backend development: PHP 5.6 with Zend Framework, including database programming in MySQL/SQL.
- Frontend development: JavaScript (jQuery) with AJAX integration and template layout in Zend and Smarty.
- Version control: Git, including the use of submodules and automated deployment.
- Software architecture: Implemented according to MVC principles and developed plugin systems.

redhotmagma GmbH ▪ Stuttgart ▪ Germany

Full-Stack Engineer

09/2016 – 03/2017

Web Development (Frontend & Backend)

- Project management and development: Worked in agile software teams using tools such as Jira, Bitbucket, Confluence, and HipChat.
- Version control and integrations: Git, SourceTree, and development of plugins to extend existing workflows.
- Development of modern web applications: Planning, implementation, publishing, and quality assurance through testing.
- Backend development: Database programming in MySQL/SQL.
- Frontend development: HTML5, CSS3, JavaScript (incl. React, Three.js), and layout design.
- App development: Built mobile applications using React Native.

Recent Projects (Chronological)

Repetitive Software Mapping Tasks, Automations

- Developed concepts for automating software mapping using API-driven processes to reduce repetitive work and increase efficiency in code analysis and data preparation.
- Integrated APIs to handle specific mapping tasks and incorporated automation workflows to relieve developers of manual effort.
- Promoted a structured approach that, through scalable and reusable solutions, enables complete optimisation of mapping tasks. For example, automation with Claude AI.

Project Management / General Application Improvement

- Extended the internal project management tool to improve organisation of tasks and tickets, particularly for the health software.
- Proposed implementation of Big Data approaches to drive feature prioritisation based on customer feedback.
- Analysed and improved the user interface, particularly for the integration of AI-powered FAQ agents and context preparation tools.

Integration and Optimisation of AI Tools in the Development Environment

- Introduced GitHub Copilot to assist with code generation and context preparation.
- Leveraged Microsoft Business Copilot to optimise work processes and make contextual data more efficiently accessible.
- Introduced meeting transcriptions to improve team communication and knowledge management.
- Developed Python and Shell scripts to automate recurring tasks in the development environment.

Development Environment Optimisation with Docker

- Built a Docker image with integrated technologies such as MySQL and a lean Apache version containing the essential components.
- Used a lean Linux system that could be operated efficiently and resource-consciously through targeted configurations.
- Developed DevOps scripts to automate repetitive tasks, significantly accelerating work processes through containerisation.
- Utilised AI tools to implement the solution quickly and efficiently.

Management and Import of Template Configurations

- Extended the existing admin and backend area to maintain and store various template types across all configuration pages.

- Implemented a UI element in the import area to automate the template configuration process.
- Ensured adherence to code conventions and collaborated closely with the team to improve existing workflows, for example by introducing Conventional Commits, which have since been firmly integrated into the development process.
- Developed modular and reusable code with a focus on database structure, performance, and code quality.
- Created and extended unit tests to ensure maintainability and reliability of the code.

Automatic Generation of API Documentation

- Implemented an open-source solution that automatically generates API documentation by reading existing API files in the Laravel project.
- Generated an up-to-date Postman collection via a single Artisan command to facilitate integration with external platforms such as Shopify or Magento.
- Extended functionality with options such as alphabetical sorting and wildcard filtering in a customised fork of the open-source extension.
- Proposed future use of AI, for example for the automatic description of API endpoints in multiple languages or the creation of standard test scenarios, to further simplify partner integration.

Education

Peter Kwasny GmbH ▪ Gundelsheim ▪ Germany

09/2013 – 07/2016

Vocational Training as IT Specialist for Application Development (German “Fachinformatiker für Anwendungsentwicklung”) (2018–2020)

During my vocational training as IT Specialist for Application Development, I acquired comprehensive knowledge and skills in various areas of software development:

- Software Development and Programming:
- Object-Oriented Programming (OOP): Applied OOP principles to develop modular and maintainable software solutions.
- Programming Languages: Deepened skills in languages such as C# and PHP to create diverse applications.
- Web Development:
- Frontend Technologies: Created responsive user interfaces with HTML5, CSS3 and JavaScript.
- Frameworks and Libraries: Used Bootstrap for designing appealing layouts and jQuery for dynamic interactions.
- Database Management:
- Database Design and Development: Modelled relational databases and implemented them with MySQL.
- Query Languages: Used SQL for efficient data manipulation and querying.
- Software Testing and Quality Assurance:
- Test Case Development: Created and documented test cases to ensure software quality.
- Testing Methods: Performed unit tests and integration tests for early error detection.
- Version Control:
- Git: Used Git for version control, including branching strategies and merge conflict resolution.
- Project Management and Documentation:
- Agile Methods: Participated in projects applying agile methods such as Scrum and Kanban.
- Documentation: Created technical documentation and user manuals to support software products.
- System Analysis and Design:
- Requirements Analysis: Gathered and analysed customer requirements to create tailored software solutions.
- Modelling Techniques: Applied UML diagrams to visualise software architectures.
- IT Security:
- Security Standards: Implemented measures for data security and protection against cyber attacks.

IES Marcos Zaragoza ▪ Villajoyosa ▪ Spain

09/2010 – 01/2013

Técnico en Sistemas Microinformáticos y Redes / Technician for Microcomputer Systems and Networks

- The training provides foundational and advanced knowledge in IT system administration, network technology, web development and programming. It focuses on the practical application and understanding of modern IT technologies.

Netzwerkkommunikation und Protokolle

- OSI Model and Protocols: Taught the 7 layers of the OSI model and their role in network communication. Detailed work with protocols such as TCP, UDP, HTTP, FTP, SMTP and DNS.
- Network Services: Set up and managed services such as DHCP, Samba, DNS and NFS.
- Diagnostics and Analysis: Used tools such as Wireshark and Ping to identify and resolve network issues.

Netzwerkkommunikation und Protokolle

- OSI Model and Protocols: Taught the 7 layers of the OSI model and their role in network communication. Detailed work with protocols such as TCP, UDP, HTTP, FTP, SMTP and DNS.
- Network Services: Set up and managed services such as DHCP, Samba, DNS and NFS.
- Diagnostics and Analysis: Used tools such as Wireshark and Ping to identify and resolve network issues.

Netzwerkadministration und Sicherheit

- Network Planning and Maintenance: Built and maintained LANs, including VLANs and wireless networks.
- Hardware and Software Integration: Configured network devices such as switches, routers and access points.
- Security: Implemented firewall and encryption techniques to protect networks from unauthorised access.

Webentwicklung

- Frontend Development: Foundations in HTML5, CSS3 and JavaScript, including responsive design and dynamic user interfaces.
- Frameworks and Libraries: Used Bootstrap for layout design and basic work with jQuery for interactive elements.
- Scripting Basics: Developed simple scripts to automate processes and integrate them into existing systems.

Allgemeine Software- und Systementwicklung

- Programming: Introduction to object-oriented programming (OOP) with languages such as Python, Java and PHP.
- Databases: Modelled and managed relational databases with MySQL and SQL, including performance optimisation.
- Version Control: Worked with Git for version control and tracking of changes.

Hardware-Montage und Wartung

- Component Management: Assembled, diagnosed faults in, and maintained hardware, including microcomputers and peripheral devices.
- Operating Systems: Installed, configured and maintained Windows and Linux, adapted to specific requirements.

Praktische Anwendungen und Projektmanagement

- Agile Working Methods: Planned and implemented IT projects applying agile methods such as Scrum and Kanban.
- Documentation and Analysis: Created technical documentation and recorded work steps.
- Vocational Education: Foundations in labour law, IT security and entrepreneurial thinking.

IES Castello d'Empuries ▪ Castello d'Empuries ▪ Spain

06/2003 – 06/2008

Secondary School Certificate (German “Mittlere Reife” / Spanish ESO) – IES Castelló d’Empúries, Catalonia, Spain

The completion of the Secondary School Certificate (Educación Secundaria Obligatoria - ESO) at IES Castelló d’Empúries encompassed a broad general education with the following focus areas:

- Spanish (Castilian): Language proficiency, literary studies and text analysis.
- Catalan: Grammar, literature and regional culture.
- English: Foreign language skills in spoken and written form, listening comprehension and conversation.
- Mathematics: Algebra, geometry, statistics and probability.
- Natural Sciences: Biology, physics, chemistry and geology with practical laboratory exercises.
- Social Sciences: History, geography, economics and social structures.
- Art and Music: Artistic expression through visual art and music theory.
- Physical Education: Promotion of physical fitness and team spirit.
- Technology: Introduction to technical concepts, computer science and practical applications.

- Ethics: Value formation and philosophical reflection.
